Docker Run:

Instructions:

The site developed presents *Leverage From Learning* (LFL), a one-day event organized by students, dedicated to fostering a culture of learning among students and enthusiasts. This system coordinates lectures, workshops, and coffee breaks for participants and speakers, ensuring a seamless and engaging experience.

When you first visit the site, you'll land on the **about page**, where you'll find an introduction to the event and its purpose. From there, you can explore the various sections of the site to discover more about the event, including detailed information about the schedule, activities, and how to register. Each section is designed to guide you seamlessly through everything you need to know to make the most of your experience.

If you're simply curious about the event and don't intend to participate, you can explore pages such as **Workshops**, **Lectures**, **Coffee Breaks**, and **Schedule** to find detailed information about their timing, locations, and content.

If you are a **Speaker** at the event, the site allows you to easily share information about your session. Once your participation as a speaker is confirmed, the organization gave you a unique ID you already know when accessing to the site, which must be used during registration to create your account. After logging in, you can submit detailed information about your lecture or workshop, including its title and description. This information will be displayed on the event pages for attendees to explore, ensuring that your session attracts those who are most interested.

For those interested in attending, registration is required. To register as a **Participant**, you'll need to provide your name, age, job description, and any food restrictions. Upon completing the registration, you will receive a unique ID, which can be used along with the password set to log in. Once logged in, you can access your personalized **Account Page**, where you can view all the activities you are currently enrolled in, edit your personal information and upload a profile photo to personalize your account.

Note that logging in to the site as a Participant does not automatically enroll you in the event. You will need to navigate to the Enrollment Page and complete the enrollment form to officially confirm your participation. This ensures you have the flexibility to explore the site before committing to the event. Your **Account Page** is accessible at any time while you're logged in and you can browse and enroll in activities that still have available spots. This ensures you can fully tailor your event experience to your interests. Whether you are a speaker or a participant, the site ensures a smooth, engaging, and personalized experience for everyone involved in **Leverage From Learning**.

To clone the Project:

```
git clone https://github.com/J-u-s-tLee/Projeto\_ESIN\_MBIOA3.git
```

Docker run:

```
docker run -d -p 9000:8080 -it --name=php -v C:\Projeto_ESIN_MBIOA3:/var/www/html  
gfcg/vesica-php73:dev
```
